\$2,000.00*

* \$200.00 Tuition reduction if application is received 60 days prior to course starting date.

Faculty:

WALEED AL-OBOUDI, MOT, OTR, is a renowned therapist and educator in the field of rehabilitation nationally and internationally. He is the originator of the Neuro-IFRAH® approach and is widely known for his superior and unmatched concepts and clinical skills in the treatment and management of patients affected by a stroke or brain injury. His basic to advanced concepts are widely copied as he was the mentor of a notable number of nationally known educators for many years. From 1993-2003 Mr Al-Oboudi taught more 3 week Neuro-Developmental Treatment/ Bobath courses than any one in the field and most of the advanced courses ever taught on record. He is the originator of all his intermediate to advanced concepts and applications. In January 2004 Mr. Al-Oboudi stopped teaching and contributing to other approaches and originated Neuro-Dynamic Therapy that since then has been identified by his concepts and applications as the Neuro-IFRAH® approach. He is also the originator of the IFRAH® concepts and applications for patients affected by orthopedic conditions. Mr. Al-Oboudi's Neuro-IFRAH® approach includes a whole system of hands on therapy, training equipment, and orthotics that are taught by Neuro-IFRAH® Instructors at top facilities and are known to be the most popular and effective courses nationally and internationally. Mr. Al-Oboudi's superior and unmatched concepts and clinical skills are self evident and set the standard of excellence as they have been continuously demonstrated in live national conferences, courses and teleconferences for over 20 years.

Participant Requirements:

Licensed Occupational or Physical Therapists, Licensed Occupational or Physical Therapy assistants. (Interested Physicians, Speech Pathologists, Registered Nurses and Recreational Therapists please contact the sponsor for other courses or special permission for attending parts or all of this course.)

Course Description:

This 98 Hour certification course is specifically designed for occupational and physical therapists who work with adults with hemiplegia from a stroke or brain injury. The main emphasis in this course is on assessment and management in functional activities to develop excellence in maximizing functional outcomes throughout the continuum of care. This course utilizes an integrative whole person approach with emphasis on restoring function and making it functional for a return to independent living and the resumption / assumption of life roles. Challenges encountered by therapists in meeting their patient's needs throughout the continuum of care, are addressed throughout the course. The course consists of lecture, laboratory practice, demonstrations and patient treatment. Individual attention by the instructors will be provided to enhance participant's observation, handling and problem solving skills. This course includes the practical application of current basic to advanced concepts sequenced in a creative manner to help all participants meet the course objectives as well as their individual objectives. Upon successful completion of the course, participants will be Neuro-IFRAH Certified®.

Course Objectives:

1. Identify the impact of the stroke / brain injury on the patient's life roles and the functional limitations interfering with his/her ability to resume / assume those roles.
2. Identify the primary & secondary impairments (movement & otherwise) underlying the functional limitations in various postures including function in upright posture.
3. Select functional activities that will assess the patient's functional limitations and underlying impairments in various postures including function in upright posture.
4. Identify concepts related to musculoskeletal biomechanics and function of the trunk, upper extremities, lower extremities, head/neck and overall body coordination.
5. Differentiate between normal and abnormal movement throughout the body in various postures and transitions in functional activities including activities in upright posture.
6. Identify concepts related to the impact of whole body alignment and control, as well as other mobility and control variables on respiration.
7. Identify missing components/processes necessary for interaction with the environment, effective learning and generalization of skills / carry over.
8. Develop a comprehensive treatment plan that will include preparation of mobility and control and facilitation of normal movement during functional activities in all postures, and ideas for carry over.
9. Develop strategies to facilitate the patients, increase awareness of the rehab process, improved self image and confidence, adaptation and planning / pacing skills.
10. Apply management strategies to help patients obtain missing components of movement throughout the body that are interfering with functioning at a higher level in all postures including function in upright posture.
11. Modify management strategies effectively based on the patient's response to maximize use of more normal and efficient movement patterns in functional activities.
12. Integrate concepts related to normal movement, musculoskeletal biomechanics and function, sensory, cognitive, communicative, perceptual-motor and emotional considerations into activities of daily living and other functional activities.
