NEURO-IFRAH® ADVANCED HANDLING AND PROBLEM SOLVING COURSE

Neuro-IFRAH® Advanced Handling and Problem Solving Course

Course description:

This five day course is specifically designed for physical therapists, occupational therapists, and physical and occupational therapy assistants who treat and manage adults affected by a stroke or brain injury and have completed the Neuro-IFRAH® Certification course. If you wish to improve your treatment and management strategies integrating skills learned in your Neuro-IFRAH® Certification course and learn advance concepts and applications that help you overcome challenges in treatment and management this course is specifically designed for you.

This course will include lecture, lab presentations by the instructor(s), participant practice on other participants, actual patient treatment by participants, problem solving/ clinical reasoning sessions, and patient demonstration by instructor(s). Lecture and lab sessions will be reinforced by audiovisuals demonstrating applications of concepts and treatment and management strategies learned. The format of this course will include specific challenges identified by course participants and step by step analysis and graded applications of concepts and treatment and management strategies to overcome the identified challenges.

Course objectives:

1. Identify variables affecting patient's function in various conditions of observation.
2. Differentiate between normal and abnormal movement strategies and otherwise utilized to complete functions presented.
3. Identify a minimum of five advanced clinical reasoning sequences presented in the course.
4. Apply basic to advanced treatment strategies learned previously and in the course on other participants and patients.
5. Demonstrate effective application of concepts and treatment and management strategies learned in this course on patients during patient treatment practicum.

This course is individualized to each class and participant needs.

Overall course content will include:

Course Content:

1. Group identification of clinical challenges, and otherwise encountered by participants in the treatment and management of their patients.
2. Brief review of strategies learned in previous course
3. Presentation of advanced clinical reasoning sequences
4. Analysis of various functional activities
5. Presentation of advanced treatment and management strategies
6. Lecture and presentation of instructor(s) about qualities of movement
7. Presentation of restoration of various functions in the context of the characteristics
8. Patient treatment by the participants
9. Patient demonstration
10. Video presentation

Neuro-IFRAH® Advanced Handling and Problem Solving Course

Faculty:

Waleed Al -Oboudi, MOT, OTR/L is a therapist and educator in the field of rehabilitation nationally and internationally for over 30 years. He is the originator of the Neuro - IFRAH ® approach and is known for his concepts and clinical skills in the treatment and management of patients affected by a stroke or brain injury. Many of his basic to advanced concepts are copied as he was the mentor of a number of known educators for many years. He is the originator of all his intermediate to advanced concepts and applications. He is also the originator of the IFRAH ® concepts and applications for patients affected by orthopedic conditions. Mr. Al - Oboudi's Neuro - IFRAH ® approach includes a whole system of hands on therapy, training equipment, and orthotics that are taught by Neuro - IFRAH ® Instructors at top facilities and are popular and effective courses nationally and internationally. Mr. Al - Oboudi's concepts and clinical skills are self evident and aim to set a standard of excellence in rehabilitation as they have been continuously demonstrated in live national conferences, courses, and teleconferences for over 25 years.
